Is this a "Fast & Focused" Search Request? (Circle One)   YES   (NO)
A "Fast & Focused" Search is completed in 2-3 hours (maximum). The search must be on a very specific topic and meet certain criteria. The criteria are posted in EIC2100 and on the EIC2100 NPL Web Page at http://ptoweb/patents/stic/stic-tc2100.htm.

What is the topic, novelty, motivation, utility, or other specific details defining the desired focus of this search? Please include the concepts, synonyms, keywords, acronyms, definitions, strategies, and anything else that helps to describe the topic. Please attach a copy of the abstract, background, brief summary, pertinent claims and any citations of relevant art you have found.

Basis for Motivation
- Delivery, management and accounting for audio advertisements difficult via conventional advertisement server systems
- Audio ads not capable of interacting with conventional Internet advertising.
- **There is a need for integrating audio advertisements with conventional advertisement server systems and for allowing interaction with audio advertisements.**

UTILITY
-User input request (speech or keypad functions) via telephone or wireless phone device web content from Internet
-Web server receives advertisement and inserts retrieved advertisement with user requested web content (VXML docs)
-Forwards web content and advertisement to transcoder for conversion to audio format. Then transmits to client device.
-User interacts with Interactive Ad
-Transcoder notifies ad server of user interaction
-Transcoder retrieve additional info associate with ad in response to user interaction
-Transcoder redirect client device to additional web do associated with advertisement via or from the ad server.
-Ad server stores accounting info include: # of times user listens to ad, Info on user interaction with ad, serving of ad to user, Info associated with providing user with additional info associated with and advertisement, id of requesting device, user, time and date info.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a voice input system by which a user
accesses a net in voice from a mobile terminal such as a PDA and a mobile
phone and a fixed terminal such as a home **telephone** , a TV and a PC so
as to receive services from providers providing map information, music
information, program information and **phone** information.

SOLUTION: The voice input system is provided with voice input terminals 10,
30 each having a voice input output means and an access state display
means, with a **voice   portal   server** 50 including; a **voice**
recognition means for capturing voice and recognizing it to be a text; a
command conversion means for collates the recognized text with a command
text dictionary to separate the text into a command text and an object
text; and an interactive control means for accessing a provider providing
various information items on the basis of the separated texts to receive
the service and outputting the service to the voice input terminal, and
with a provider 60 for serving searches information on the basis of the
command text and the object text received from the **voice   portal   server**
50 and serving the result to the **voice   portal   server** .

ABSTRACT

PROBLEM TO BE SOLVED: To obtain a browser-installed device which can be operated without looking at its display screen.

SOLUTION: This device is connected to a network 58 through a communication means 52 as instructed by a browser 51 to access a **Web server** on the **Internet**, and a downloaded HTML text is temporarily stored in a storage means 53. A **voice browser** 1 reads it to compose an optimized **document** to be read out aloud and transfers it to a voice synthesizing means 2, so that the **document** is voiced through a voice output means 3. The voice that the user speaks is inputted to a voice input means 5. The inputted voice is **voice recognized** by a **voice recognizing** means 4. When the recognition result is recognized as a candidate for a control instruction to the **voice browser** 1, the **voice recognizing** means 4 interrupts the **voice browser** 1 and transmits the candidate for the recognized control instruction to the **voice browser** 1.

DEVICE AND METHOD FOR **VOICE BROWSER** AND STORAGE MEDIUM WITH PROGRAM STORED THEREIN

ABSTRACT

PROBLEM TO BE SOLVED: To enable voice input even when a grammar dictionary for **voice recognition** is not prepared on the **contents** side.

SOLUTION: The **voice browser** which is capable of voice input is equipped with a voice input part 107 which inputs a voice, a **voice recognition** part 108 which recognizes the inputted voice, a **contents** dictionary holding part 103 which holds a **contents** dictionary for **voice recognition** described in **contents** , a user dictionary holding part 105 which holds user dictionaries for **voice recognition** prepared by users, and a dictionary switching part 104 which switches a dictionary used by the **voice recognition** means to a user dictionary when a **contents** dictionary corresponding to an input field as an object of data input among input fields provided to the **contents** is absent.

ABSTRACT
PROBLEM TO BE SOLVED: To provide a **voice** **browser** and conversion system capable of making a **web** site voice-friendly.

SOLUTION: This **voice** **browser** and conversion system is provided with **text** / **speech** conversion software for reading a **web** page and a mechanism for navigating to the next page by a simple key stroke or **speech** **recognition** . An end user requests access to a computer through a basic **telephone** set and navigates a computer network, and by preparing a mask on the page by the end user, customized news and other information are retrieved and specified requested **web** page is accessed. Each end user customizes the page for an individual possibly containing the main information of sports and weather, etc., and accesses the original individual page through the **telephone** set or the other device such as a personal digital assistant.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a **voice browser** system which enables even a visually handicapped person to acquire the WWW information.
SOLUTION: This system includes a **server** 100 that has a voice request acquisition means 101 which acquires a request from a client 200 via the input of voices, a **voice recognition** means 102 which recognizes the voices of the request inputted from the means 101, a request transmission means 103 which transmits a request to the URL that is designated by the client 200 based on the recognition result of the means 102 to an **internet** 70, a voice data generation means 104 which extracts a read-aloud text from the answer given from the **internet** 70 and converts the text into the voice data to synthesize the voices and a voice data transmission means 105 which transmits the voice data generated by the means 104 to the client 200. The system also includes the client 100 that has a voice input means 201 which inputs the requests given from the users in voices, a request issue means 202 which extracts the URL from the result acquired from the **server** 100 and gives a request of an HTML file to the **server** 100 based on the extracted URL and a voice output means 203 which outputs the voice data received from the **server** 100.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 20040205118	A1		9	G06F-015/16	

Abstract (Basic): US 20040205118 A1
     NOVELTY - The method involves determining a localization context for a user and retrieving an electronic **document** for the user to view. The electronic **document** is constructed based on the localization context for the user. The electronic **document** and an object style are formatted based on the localization context with which the user is affiliated. The electronic **document** `s layout is arranged based on the localization context.
     USE - Used for programmatic localization of an electronic **document** e.g. **web** page, for e.g. a banner **advertisement** , **audio** file or video, currency symbol, by a user over an electronic network (claimed) e.g. **Internet** .
     ADVANTAGE - The method allows the localization to be done seamlessly and systematically. The method facilitates to show how to

localize a symbol or object with respect to the context, thus allowing
for more efficient and powerful localization. The method automatically
invokes the localization of the **web** page without user's input, such
that the localization can be made automatically without the users's
intervention. The method provides the localization of a string, a
layout, a formatting, and a flow of the **web** page and a **document** .
The method facilitates to process the localization not just with
respect to language but also with respect to geography and culture.
    DESCRIPTION OF DRAWING(S) - The drawing shows a table configuration
that provides localization of electronic **documents** .

Abstract (Basic): KR 2004061226 A
    NOVELTY - A method for a voice service is provided to offer diverse
voice **Internet** services by adding a new element to play **audio** as
background to the **VXML** (**Voice** **eXtensible** Markup Language).
    DETAILED DESCRIPTION - For a voice service request, it is judged
that a background element is used. If the background element is used,
it is judged that the background element is used together with other
audio element. If the background element is used together with other
audio element, an **audio** file assigned by the background element and
a voice or **audio** file assigned by the **audio** element are
mixed/played to a user.

KR 2004049224 A   1 G06F-019/00

Abstract (Basic): KR 2004049224 A
        NOVELTY - A system and a method for making **audio** data in
    real-time by using the **Internet** are provided to edit an **audio** file
    in the real-time by connecting to the **Internet** and transmit the
    edited **audio** file to a desired target or device.
        DETAILED DESCRIPTION - A user generates the desired **audio** file by
    editing the sound source data provided from a voice **web** **server** (12),
    a **VXML** (**Voice** **eXtensible** Markup Language) **server** (13), and sound
    source providers(15) through a user computer(17). In case that an
    audio input device is installed to the user computer, the **audio** file
    is generated by recording/storing/editing a voice of the user. An
    audio file making system(11) provides the sound sources received from
    the sound source providers to the user, and undertakes a
    hardware/software system configuration for editing/generating the
    audio file, and the operation of service logics.

Abstract (Basic): US 20040174980 A1
        NOVELTY - The options regarding customer activities, are provided
to customer held in queue, based on estimated hold time, and the
customer is connected to selected activity. The availability of agent
is notified to the customer, and customer activity history is notified
to the agent. An option of returning to customer activity is provided
to customer, upon completion of customer and agent interaction, based
on received history.
        DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
customer activities providing system.
        USE - For providing customer activities such as music, company
messages or **advertisements** , to customers held in queue in customer
service center.
        ADVANTAGE - The provision of customer activities reduces the
frustration and monotony of holding in queue to speak with the agent
and also reduces the perceived duration of hold time, thereby
sustaining and possibly increasing the customer satisfaction levels.
The customer activities also increase the customer's exposure to **voice
portals** and self-service applications.
        DESCRIPTION OF DRAWING(S) - The figure shows a flow chart
explaining the customer activities provision method.

US 20040148424 A1   18 G06F-015/16

Abstract (Basic): US 20040148424 A1

NOVELTY - The file includes a primary **advertisement content**
stored along with primary media **content** and header information, so
that the primary **advertisement content** is played, based on the
header information, before playing the primary media **content** in the
player.
DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
following:
(1) digital media **content** distribution method;
(2) article of manufacture comprising computer readable medium
storing digital media **content** distribution program.
USE - For storing **audio** and video **content** , **advertisement**
which are transmitted through **internet** to client device e.g. disk
player, personal computer, personal digital assistants (PDA),
standalone hardware player, standalone portable players, Kiosks or set
top boxes for storage in compact disk (CD), floppy disk, zip disk,
digital versatile disk (DVD).
ADVANTAGE - The **advertisement** information is automatically
expired, resurrected and/or updated to promote the product/service to
the consumer.
DESCRIPTION OF DRAWING(S) - The figure shows a flowchart explaining
playing of bundled media file.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
KR 2004023990	A		1	G06F-017/00	

Abstract (Basic): KR 2004023990 A
NOVELTY - An ARS(Automatic Response System) hosting system through
the **Internet** and a service method using the same are provided to
offer an ARS service to a **telephone** user connecting to a service
telephone number according to the ARS information registered by a
member through an **Internet** terminal.
DETAILED DESCRIPTION - A **web** **server** (31) generates a **VXML** (
Voice **eXtensible** Markup Language) code based on a **web** **document**
including the service **telephone** number for offering the ARS service,
a service area, and an incoming call connection **telephone** number
received from the member through the **Internet** . A TTS(**Text** To

Speech) **server** (34) generates a voice file based on the **web document** received by the **web server**. An application **server** (32) stores the **VXML** code and the voice file. A database(35) stores a **web document** form, the ARS service **telephone** number, the service area, and the incoming call connection **telephone** number. A **VXML server** (33) interprets the **VXML** code stored in the application **server**. An IVR(Interactive Voice Response) **server** (36) offers the ARS service to the user by interpreting the **VXML** code and executing the voice file.

US 20040088363	A1		7	G06F-015/16	Provisional application US 2002405786

Abstract (Basic): US 20040088363 A1
      NOVELTY - The method involves establishing assumed frequencies with which subsets of **content** elements have been viewed by the users. The assumed frequencies are evaluated with respect to predetermined frequency targets to determine about delivery of alternate **content**. The data stored in network storage device is updated to aid in determination of whether the alternate **content** is to be shown based on the determination result.
      USE - For limiting delivery of **content** including text, graphics, **audio**, video, multimedia especially **advertisements** in communication network environment such as world wide **web** (WWW).
      ADVANTAGE - Allows **content** delivery limiting not only by particular **content** by also by campaigns. Increases performance of serving for the end user and adds redundancy to the serving process that makes the **content** delivery virtually failsafe.

					Cont of application US 98109945
					Cont of application US 99472385
					CIP of patent US 5778181
					Cont of patent US 6018768

Abstract (Basic): US 20040030759 A1
      NOVELTY - The method involves automatically establishing a
communications path with an online system information provider without
user interaction so that the information **content** is pushed to the
user. The information **content** is presented to the user after
receiving the information signal from the online system information
provider.
      DETAILED DESCRIPTION - The communications path with the online
system information provider is automatically established after
obtaining the address associated with the online system information
provider, and after receiving the programming signal. The programming
signal contains a video or **audio** program. An INDEPENDENT CLAIM is
included for enhanced video programming system.
      USE - For incorporating and displaying retrieved integrated
Internet information segments. For combining broadcast TV programming
or video programming on a VHS or Beta tape, CD-ROM, DVD or other medium
or video programming at a video **server** with massive **Internet** to
create a new and powerful educational and entertainment medium.
      ADVANTAGE - Allows consumers to receive more information in a more
efficient manner than either TV or the **Internet** alone. Creates a more
intimate relationship between the viewer and the program. Enables TV
program producers to decide what additional information to offer their
audience since specific **Internet** pages can be in sync to the video
signal and the enhanced video programming system puts the **Internet** in
context. Ensures that consumers don't have to search through hundreds
of millions of pages on the **Internet** to find appropriate material,
since the material has already been filtered by the program producers
and delivered to the consumer automatically. Ensures substantive
advertising since additional information can be given to consumers
automatically, allowing customers to make more informed choices.
Creates a powerful new medium by combining the appeal of video with
two-way data transfer capabilities of the **Internet** .
      DESCRIPTION OF DRAWING(S) - The figure shows the basic software
design of the enhanced video programming method.

Abstract (Basic): US 20040019648 A1

      NOVELTY - The data signal has an **Internet** protocol (IP) message
   that contains a logic for testing digital **content** capabilities of a
   receiving computer system (150). Another logic displays a version of
   digital **content** **advertising** message selected based on the results
   of testing digital **content** capabilities. The receiving computing
   system uses the **content** of the IP message to display the version.
      DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
   following:
      (a) computer memories
      (b) a method for serving digital **content** units
      (c) a method for summarizing the results of sending an IP message
   to a recipient
      (d) a computer-readable media whose **contents** cause a computer
   system to generate an IP message
      (e) a computing system for sharing e-mail response data
      (f) a method in a computing system for generating a multi-layered
   message
      (g) a method in a computing system for tracking the results of
   sending an IP message to a recipient.
      USE - Used for media delivery.
      ADVANTAGE - The IP messages include multimedia and can adapt to
   capabilities of a recipient's computer system. The messages are used to
   replace mailed print brochures with interactive multi-media brochures,
   or improving the effectiveness of e-mail marketing campaigns.
      DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram
   representing typical configurations of and connections between computer
   systems on which the facility operates.

US 20030216958 A1	37	G06F-017/60	
AU 2003231065 A1		G06F-015/16	Based on patent WO 200398457

Abstract (Basic): US 20030216958 A1
    NOVELTY - A central **server**   (4) transmits play lists and
advertisement information to in-store broadcast supported on a client
player device (6), through **audio** /visual network system. The client
player devices located at different business locations broadcast
different customized music and **advertisement**   **contents** to consumers
by selecting specific business locations.
    DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
method of providing in-store media broadcasting through an in-store
media.
    USE - In-store media broadcasting system for shopping malls,
supermarket, drug stores, grocery stores.
    ADVANTAGE - The client player devices are operated independently to
each other, hence the functions of client player devices are managed
efficiently to display specific targeted **advertisements** at particular
business location, thereby improving the sales of each business
location.
    DESCRIPTION OF DRAWING(S) - The figure shows a schematic view of
the in-store media broadcasting system.

central **server** (4)
                client player devices (6)
                chain manager (8)
                network manager (10)
                central **server** system (40)
                music database (47)
                file transfer protocol **server** database (49)

Abstract (Basic): US 20030216917 A1
      NOVELTY - A **voice   recognizer** (10) detects an interaction
    response **content** indicating a psychology of voice inputting person
    during voice interaction. An input state analyzer (18) analyzes the
    detected interaction response **content** and classifies the psychology
    into predetermined input state information.
      USE - E.g. **voice   portal** providing voice response services using
    speech or voice. Also for **voice   recognition** , language analysis and
    voice synthesis.
      ADVANTAGE - Interaction with the user is performed even when the
    interaction voice is not understood or during incomplete interaction
    response, by analyzing the psychology interacted voice, thereby a clear
    and efficient interaction is enabled.
      DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
    the voice interaction apparatus.

Abstract (Basic): US 20030187953 A1
      NOVELTY - A desired set of desired programming and commercial
  contents are encoded according to the custom settings, to improve
  audio and video quality within acceptable bandwidth. The encoded
  programming **contents** are divided into individual files with adjusted
  audio /video run time. The finalized **content** is distributed into a
  format containing the programming and commercial files based on the
  play list.
      DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
  method of delivering multimedia **content** .
      USE - For preparing multimedia program in **Internet** based
  multimedia distribution to television, personal computer and other
  Internet appliances.
      ADVANTAGE - Enables recognizing the product/services offered
  through **advertisements** during viewing **websites** thereby management
  expense for the **websites** , is handled easily. Prevents generation of
  view disturbance to viewers, by setting the time interval between the
  commercial and view **contents** appropriately.
      DESCRIPTION OF DRAWING(S) - The figure shows the schematic flow
  diagram indicating the processing of commercial **content** .

Abstract (Basic): US 20030167300 A1
        NOVELTY - The addresses for identifying source of the online
    content , are obtained. The obtained addresses are transmitted to the

user, so that the online **content** is automatically transmitted to the
user at predetermined timing, during the program broadcast.
    DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
following:
    (1) computer readable medium storing address transmission program;
and
    (2) hosting system.
    USE - In computer for transmitting uniform resource locator (URL)
address of online **content** such as text, graphics, video data, **audio**
, animation, video stills, slow frame video and multimedia data,
related to broadcasting program such as sports program, **advertisement**
program, motion picture program, game show program, video/ **audio**
program and live program, to a user.
    ADVANTAGE - The user receives the online **content** information in
an efficient manner, so that the act of viewing a program enriches the
experience of the user, thus the user finds the desired information on .
internet , without searching through the available pages.
    DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
the host computer.

Abstract (Basic): WO 200371422 A1
        NOVELTY - The method involves browsing a hypertext markup language
    content in a visual browser (120) and executing a jump to a
    non-existent relative link in the **content** item. A view control is
    used to recognize a name associated with the non-existent relative
    link. The visual browsers state is indicated to a **voice extensible**
    markup language browser (112) when the name associated with the
    relative link is recognized.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
    following:
        (a) a computer readable medium encoded with computer-executable
    instructions to synchronize the browsers
        (b) a system to render an item of markup **content** .
        USE - Used for synchronizing browsers in computer-based
    communication systems.
        ADVANTAGE - The method synchronizes the browsers so that, the HTML
    browser informs the interaction taking place in visual mode to the
    VXML browser and the **VXML** browser informs the interaction taking
    place in voice mode, thereby providing effective communication between
    the browsers.
        DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of
    exemplary browser synchronizing system.

JP 2003202881 A   9 G10L-013/00

Abstract (Basic): JP 2003202881 A
        NOVELTY - The textual **content** in specific markup language format,
    is acquired and divided into multiple blocks. A subject word is
    extracted from each block to designate the block for converting the
    block into an **audio** -response format.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
    following:
        (1) markup language **document** converter; and
        (2) recorded medium storing markup language **document** conversion
    processing program.
        USE - For converting **documents** in specific markup language format
    such as hypertext markup language (HTML) into **audio** - response format
    such as **voice** **extensible** markup language (**VXML**) for applications
    like automatic **telephone** answering.
        ADVANTAGE - The subject words enable the user to grasp the complete
    profile of the markup language **document** without reading all of the
    document **content** and the subject words also enable the user to
    designate a desired block of **audio** -response format conversion.
        DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
    the markup language **document** converter. (Drawing includes non-English
    language text).

KR 2003027359 A   1 G06F-017/00

Abstract (Basic): KR 2003027359 A
        NOVELTY - A method and system for interlocking a **voice** browser
with a conventional **web** browser is provided to interlock with a
conventionally used **web** browser and to supply a **voice** **recognition**
function and a voice synthesis function.
        DETAILED DESCRIPTION - A **web** /voice interface(12) is interlocked
with a **web** browser(11) and uses an HTTP(Hyper Text Transfer Protocol)
for requesting data to various **web** **servers** on the **Internet** . A
server computer(30) is connected to a client computer(10) through a
network(20). The **web** /voice interface(12) executes as a **voice**
browser with a voice engine(33). A **web** **server** (31) supplies a **web**
page prepared through a tool such as an HTML(Hyper Text Markup
Language) in accordance with a request of the client computer(10). A
voice **server** (32) is interlocked with a voice file DB having voice
contents of a **VXML** (**Voice** **eXtensible** Markup Language) format, and
supplies voice **contents** to the client computer(10). The voice
engine(33) converts voice data and character data interactively through
a **voice** **recognition** function and a voice synthesis function between
the **web** /voice interface(12) and the voice **server** (32).

Abstract (Basic): US 20030065427 A1
NOVELTY - The system comprises a voice communicator, a data communicator and an onboard device situated in a vehicle (38). The onboard device communicates electronically with the voice communicator and the data communicator. A base station (39) communicates wirelessly with the voice communicator and the data communicator. A **voice portal server** (27) communicates with the base station.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(a) a vehicle electronic apparatus

(b) a method of providing information to occupant of vehicle.

USE - Used for interfacing driver information system using **voice portal server**.

ADVANTAGE - The system provides an efficient high quality **voice recognition** system for the user, using an interface that quickly and seamlessly responds to the users queries and responses.

DESCRIPTION OF DRAWING(S) - The drawing shows a schematic representation of the navigation system showing the vehicle and the system external to the vehicle.

Voice portal server (27)

Vehicle (38)

Base station. (39)

Abstract (Basic): JP 2002169750 A
NOVELTY - A **voice recognition** unit recognizes input voice data to determine **document** to be searched in a **web server**. A **voice browser** (1) reads a HTML text to compose the searched **document** which is synthesized and output through a loud speaker (3).

USE - Browser-installed device.
ADVANTAGE - The browser-installed device is operated without
viewing a display screen, by synthesizing and outputting **document**
through speaker, corresponding to recognized input voice data.
DESCRIPTION OF DRAWING(S) - The figure shows the browser-installed
device. (Drawing includes non-English language text).

Abstract (Basic): US 20020152117 A1
     NOVELTY - A transmitting system (102) determines the user profile
targeted using the media object received from the input port. The
system identifies a user associated with the user profile, and the
media object is transmitted to the identified user.
     DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
following:
     (1) Media object generation system;
     (2) Media object transmission method;
     (3) Media object generation method;
     (4) Computer readable medium for storing media object transmission
program;
     (5) Media object presenting system;
     (6) Media object presenting method;
     (7) Computer readable medium for storing media object presentation
program;
     (8) User profile generation system;
     (9) User profile generation method;
     (10) Media object pushing method; and

(11) Media object pulling method.

USE - Media object transmission system in electronic information access system e.g. television, radio, **Internet** , multimedia **content** creator. For sponsoring program e.g. news program, sports program e.g. football, virtual reality program, entertainment program, music video, game show program, motion picture program, video program, live program, **audio** program, polling question, educational program, non-commercial program and pre-recorded program using **wireless** transmission system e.g. analog and digital television broadcast, analog and digital radio broadcast, analog and digital **wireless** communication network, microwave system, millimeter wave system, infrared system, and satellite broadcast system and in wire based transmission system e.g. analog and digital cable system, coaxial connection, fiber optic link, **telephone** system, closed circuit system, very high speed digital subscriber lines (VDSL), VGD using **Internet** , private network, public network, **wireless** network, wired network, ATM network, wide area network, local area network and intranet.

ADVANTAGE - User profiling information is utilized by the receiving system/transmitting system to determine which of the media objects are to be presented to a specific user at any instance during program, **advertisement** or multimedia presentation. Provides efficient and effective targeted **advertising** /programming to users, without requiring massive tradeoffs in bandwidth, transmission capacities, or other variables.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic representation of a system providing media object based **content** targeted to users based on user profiles.

Abstract (Basic): US 20020156842 A1
        NOVELTY - Media streams with a place holder including a
    temporo-spatial point in the media stream and a location where the
    media content can be obtained are received. A specific media content
     including place holder is generated in response to request from a
    user.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
    following:
        (1) Server operating method; and
        (2) Memory.
        USE - For customizing audio -visual media content which includes
     advertisement , specialized message, remainders about specific
    upcoming events, updates with respect to sporting scores or news and
    other types of content .
        ADVANTAGE - By generating specific media content including place
    holder, the user can integrate several media streams to provide a
    single, integrated display.
        DESCRIPTION OF DRAWING(S) - The figure shows a flowchart
    illustrating the media stream integrating procedure.

Patent Details:
Patent No Kind Lan Pg   Main IPC   Filing Notes
KR 2002058386 A   1 G06F-017/20

Abstract (Basic): KR 2002058386 A
        NOVELTY - A **voice browser** is provided to return **contents** of a
    web document to a user as a voice by interpreting a structural
    characteristic of a **web document** , selecting only an element to be
    transmitted, creating new structure using the selected element,
    connecting the structure to a voice guide, recognizing the second
    document element, and using a timbre effect corresponded to a user who
    uses a corresponding vice browser and a characteristic of a
    pre-promised **document** element one to one.
        DETAILED DESCRIPTION - A **voice recognizing** device and a
    synthesizer are initialized(302). If a user executes a **web** browser to
    be used in an **Internet** connection(303), the user moves to an initial
    homepage or connects to an **Internet web** site by a bookmark or a
    voice input(304). At this time, an HTML(Hyper Text Markup Language)
    file is transmitted from a **server** . Information expressed in a **web**
    page is searched and processed and proper **voice recognition**
    candidates are created at the HTML file in an HTML file analyzer and a
    vocabulary creating unit(305,307). The received HTML file is displayed
    in the **web** browser as a tree structure, and it is judged whether a
    mouse or keyboard input or a voice input is entered(308). If input is
    entered, the inputted recognition result is analyzed(309). It is judged
    whether the recognition result has new URL. If the recognition result
    has new URL, the URL is connected(315). If the recognition result does
    not have new URL, corresponding information is output as a voice. If
    the recognition result is a command for terminating a **web**
    browser(314), the **web** browser is terminated(317) and the entire
    process is terminated.

        NOVELTY - A remote apparatus (23) of a user is linked to a database
    containing user selectable information and service provider defined
    information. The user selects a portion of the user selectable
    information and provider defined information and transfers the selected
    information to the remote apparatus.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
    following:
        (1) Machine readable storage device comprising information transfer
    program;
        (2) Media segment access provision system;
        (3) Media segment transfer system; and
        (4) Information transfer apparatus.
        USE - For transferring information such as media segments e.g.
    musical segments, **audio** clips, video clips, songs, books on tape,
    musical compositions, TV programs, movies, multimedia projections,
    executable code and data, banner **advertisement** , interactive
    advertisement , **audio** /video or multimedia **advertisements** , etc.
        ADVANTAGE - Allows the users to enjoy the media **content** of their
    choice and allows the providers to target a certain segment of the
    population with their desired **contents** such as **advertisements** ,
    hence both streaming multimedia and large data objects are enabled to
    be delivered to several destinations including that of both consumer
    and business markets simultaneously and allows the freedom of the
    Internet and combines it with a revenue stream so that all parties
    benefit from the transactions.
        DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
    the information transfer system.

Abstract (Basic): US 20020138641 A1
        NOVELTY - A play list including references is created and is sent
     to a media player. A request for media clip associated with one of the
     references in the list is received and redirected to a media **server** .
     The dynamically selected media clip is substituted for the requested
     media clip.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
     following:
        (1) System for continuously streaming media clips;
        (2) Computer readable medium storing media clips streaming program;
     and
        (3) Apparatus for continuously streaming media clips.
        USE - For streaming media clips to deliver **content** such as video,
     audio , **advertisement** , etc.
        ADVANTAGE - Dynamically assembles and changes media clips while
     reducing or eliminating delays between media clips. Avoids problems of
     scalability by allowing requests for media clips to be redirected to
     various **servers** .
        DESCRIPTION OF DRAWING(S) - The figure shows the flowchart
     explaining the process for providing media **content** dynamically.

Abstract (Basic): EP 1251440 A2
        NOVELTY - A user terminal (8) sends a token received from a mass
    medium to a link up **server** (6). The **server** determines a **content**
    identifier corresponding to the token and items of **content**
    information corresponding to the identifier from respective databases
    (4,5). The **server** selects items based on attribute information of
    content for sending to the user terminal.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
    following:
        (1) Portable user terminal;
        (2) **Content** information obtaining method;
        (3) Computer program for causing portable user terminal to obtain
    content information; and
        (4) Computer readable medium storing computer program.
        USE - For providing **content** information related to
    television/radio broadcast, bulletin boards, street or strap,
    advertisement, magazine, show window, electric sign board, hand bill,
    push media display used in train, to users of portable terminals such
    as portable PC, wearable PC, PDA, **Internet** appliance, high
    performance **telephone**, mobile **telephone**, set-top box, **audio**
    visual apparatus, radio receiver, digital still camera through
    Internet.
        ADVANTAGE - By using the token **content** information, user's
    interest can be easily selected and accessed.
        DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
    the **content** information providing system.

KR 2002063523	A			G06F-017/00	

Abstract (Basic): US 20020103855 A1
    NOVELTY - The user identifier stored in a hard disk drive (150) of
a client console (120), is uploaded to a download management **server**
(110) to enable access of the requested primary **content** stored in a
database (160). The auxiliary **content** stored in the hard disk drive
is played by the client console during download of the requested
primary **content** .
    DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
following:
    (1) Auxiliary **content** provision method;
    (2) Client console operation method.
    USE - For providing auxiliary **contents** such as **advertisements**
during download of primary **content** such as utility programs,
interactive games, **audio** MP3 data, motion pictures from a **server** .
    ADVANTAGE - Enables viewing of **advertisements** at the option of
the customer, while the customer accesses valuable **content** from a
primary **content** database maintained solely by the **content** provider.
Allows identifying information of users who access the **server**
station, to be downloaded into the client console in order to enable
only auxiliary **content** which is customized based on user's
identification profile, to be loaded and viewed. As the **advertisements**
 are stored in local storage such as hard disk drive, the cost .and time
associated with the download can be avoided and the costs expended for
maintenance of **advertisement** database in the **server** side can be
reduced, so the **advertisers** are provided with flexibility for
preparing their own **advertising** **content** on relatively low cost
packaged storage media. Allows ' **content** providers to associate their
advertisements with valuable primary **contents** .
    DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of a
computer network system which employs the auxiliary **content** provision
system.
    Download management **server** (110)
    Client console (120)
    Hard disk drive (150)

AU 2002245289 A1   G10L-015/00   Based on patent WO 200273597

Abstract (Basic): WO 200273597 A1
     NOVELTY - A presentation layer (152), application logic (154),
  information access services (156) and a telecommunications
  infrastructure (159) are served by an application **server** (160),
  multiple mechanisms (162) and a voice interpreter (164). Utterances are
  received from a user and a genre is determined based on information
  independent from the utterances of the user. Acoustic models are
  selected based on the genre, and utterances are recognized utilizing
  the models.
     DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a
  computer program product for genre based **speech   recognition** .
     USE - The method of genre based **speech   recognition** is used for
  an automatic **speech   recognition** system used with a **telephone** .
     ADVANTAGE - The method identifies a genre so that genre based
  models can be used. Pre-training for a speaker's voice is not required
  so that the method can be applied to **telephone   voice   recognition**
  in, for example, **voice   portals** , finance, banking,
  telecommunications and brokerages.

DESCRIPTION OF DRAWING(S) - The figure shows an environment in which a method of genre based **speech recognition** can be implemented.

 Presentation layer (152)
 Application logic (154)
 Information access services (156)
 Telecommunications infrastructure (159)
 Application **server** (160)
 Multiple mechanisms (162)
 Voice interpreter (164)

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 20020073235	A1		22	G06F-015/16	

Abstract (Basic): US 20020073235 A1
 NOVELTY - The **Internet content** control **server** communicating with a **web server** and a cellular **phone** receives a user request to display the **Internet content** on the cellular **phone** . The **server** executes the stored customized parsing script to parse items in the user-requested **Internet content** in real-time and transfers the parsed **Internet content** to the cellular **phone** .
 DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for **Internet content** transmission control method.
 USE - For transmitting **Internet content** such as **web** pages, navigation links, pieces of text, tables, graphics, videos, **audio** samples, HTML files, e-mails, etc., and also local or regional news, weather, sports, business and **advertisements** to WAP enabled devices such as cellular **phones** , palmpilot, research in motion (RIM) device and PDA.
 ADVANTAGE - Provides real-time availability of **Internet content** at reduced cost and time and allows companies to easily add **content**

or change the format of their **web** pages in fraction of time and at
significantly less expense for limited display devices. Saves time for
users who access items quickly at personal computer or cellular **phone**
while at the home, conferences, office, hotel and plane, etc.
    DESCRIPTION OF DRAWING(S) - The figure shows the flowchart
depicting the transformation of the **Internet   content** for
accommodation in a **wireless** , limited display device.

Abstract (Basic): WO 200263490 A1
      NOVELTY - Method consists in selecting a moving image, selecting
   contents to be overlaid, such as text or hypertextable characters
   linked to an associated homepage, a banner, **ad** , photograph, scent,
   audio information etc., generating edit information for the overlay,
   creating a script containing the edit and **contents** data information,
   and sending the moving image data and the script to the user computer.
      DETAILED DESCRIPTION - There are INDEPENDENT CLAIMS for:
      (1) A method of processing e-mail
      (2) An e-mail computer program
      USE - Method is for **Internet** video processing of e.g.
   hypertextable characters, banner **advertisements** , photographs, **audio**
   , scents etc. on a separate moving page.
      DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of a
   streaming-based moving image- **contents** overlay processing method.

KR 2002012362 A   1 G06F-017/30

Abstract (Basic): KR 2002012362 A
      NOVELTY - A voice **web** system based on a **voice   recognition** is
   provided to execute an **Internet** searching process easily and rapidly
   by outputting information on the **Internet** to a user as a voice in
   case that the user listens a supplied menu and inputs wanted
   information as a voice using a **telephone** , a **voice   recognition** ,
   and a voice compounding technique without an additional device as a
   computer or a monitor necessary for using the **Internet** .
      DETAILED DESCRIPTION - If a voice command is inputted using a
   public switched **telephone** network(20) for connecting general
   telephones (10,11) to a **telephone** office and an **Internet** network(3)
   connected by a voice **server** (130), the voice **server** (130) based on a
   voice communication senses the voice command and supplies information

to an ear of a user. In case that a user using general **telephones** (10,11) talks a menu corresponded to **Internet** information as a voice, the **voice portal** service system(100) senses the voice and performs a voice-composition of user wanted information and outputs the processed information. The voice **server** (130) may manage DBs(150) necessary for a **voice recognition** by a CGI(Common Gateway Interface)(140) or may discriminate a link tag supporting a hyper text by analysing a HTML **document** on the Internet .

Abstract (Basic): KR 2002011487 A
        NOVELTY - A voice **web** hosting system using .**VXML** is provided to easily search and get information by enabling users to connect to an operator **server** capable of providing a **web** hosting service of a voice homepage through a mobile communication terminal or a **telephone** including a computer, and by enabling the users to search **contents** of homepages in voice.
        DETAILED DESCRIPTION - A voice **web server** (10) is connected with an ASR(Automatic **Speech Recognition**) **server** (14) and a TTS(**Text To Speech**) **server** (16). The voice **web server** (10) processes signals inputted from arbitrary users. The ASR **server** (14) compares users' voices with standard voice patterns. The TTS **server** (16) converts **contents** of a voice homepage database(24) into voices according to users' play request signals in case that **contents** of a voice homepage database(24) are made in text form. In addition, the TTS **server** (16) outputs the **content** converted into the voices. A database **server** (20) includes a member database(22) which manages basic information on members and the voice homepage database(24) which stores data files registered by specific members.

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 20020062393	A1		13	G06F-015/16	Provisional application US 2000224152

Abstract (Basic): US 20020062393 A1
     NOVELTY - A **web** **server** retrieves an **advertisement** in
  text-format from an **advertisement** **server** based on user's request.
  The retrieved **advertisement** is inserted within the user requested
  web **content** , and is forwarded to a **text** -to- **speech** transcoder.
  The transcoder converts text message into an **audio** format which is
  served to the user device through **telephone** link.
     DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
  following:
     (1) **Advertising** integration method;
     (2) Computer program product storing program for integrating
  advertisements ; and
     (3) **Advertising** **server** .
     USE - Networked computer system used for portable computers with
  modems and/or radiotelephone capabilities, handheld computers, personal
  digital assistants (PDA's) with modems and/or radiotelephone
  capabilities, pagers, cellular ˙**telephones** , **web** **phones** , **web**
  enabled radiotelephones and other mobile/ **wireless** device.
     ADVANTAGE - The interactive **audio** **advertising** is easily
  performed by conversion of the text format into the **audio** formation,
  using the transcoder. The information such as identification of
  requesting client data, user and time and date information is recorded
  by the user which is used in measuring effectiveness of a particular
  advertising campaign, are recorded. The **server** is also configured to·
  determine the number of times the user listens to the **advertisement** .
     DESCRIPTION OF DRAWING(S) - The figure shows a flowchart
  illustrating the interactive **advertising** within **audio** **web**
  content using the integration method.

Abstract (Basic): US 20020035601 A1
     NOVELTY - An encoder located at a **web** hosting site encodes a
program and an address identifying an online **content** into a
programming signal. A transmitter transmits the programming signal to
the user. The online **content** is automatically retrieved and played to
the user in conjunction with the program at some time after provision
of the address.
     DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
following:
     (a) Video programming signal transmission method;
     (b) Computer readable medium storing instructions for transmission
of programming signal
     USE - For interactive video programming including provision of
educational programs especially for use in student work stations, class
rooms or other education environments, **advertisements** , live programs,
music video, **audio** , news, game shows, sporting events and motion

picture programs through **Internet** , intranet, terrestrial broadcast,
RF broadcast, cable, satellite broadcast, fiber optics, **telephone**
circuit, **wireless** connection, public and private networks to users.
   ADVANTAGE - Creates new and powerful educational and entertainment
medium that allows users to receive more information in an efficient
manner. Provides introduction to a specific subject and eliminates
users to search through several pages on the **Internet** . The
combination of the video with the two-way transfer capabilities of the
Internet , enables video producers and **Internet** site creators to
enhance their **content** to extend their band identity and differentiate
their program offerings to several people. Enables **advertisers** to
directly speak with the consumers, thereby providing significant and
immediate benefits to the broadcasters and **advertisers** . Provides
flexible and less complex system that supports analog or digital TV
broadcast and that allows broadcasters to reach wide audience within
short time.
   DESCRIPTION OF DRAWING(S) - The figure shows the system design for
receipt and decoding of digital signals at subscriber location.

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 20020038383	A1		22	G06F-017/00	

Abstract (Basic): US 20020038383 A1
   NOVELTY - A programming signal containing video or **audio** program
   is received from a communication link e.g. **internet** . A communication

path is automatically established with an online system information provider without user interaction, so that the information **content** provided by the information provider is pushed to the user.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for programming and online system service providing system.

USE - For combining broadcast television programming or video programming stored in VHS, CD-ROM, DVD, etc. with **internet** information to provide educational and entertainment information such as for displaying biographical information of an artist, concert schedule and goods related to an artist while broadcasting the music video, etc.

ADVANTAGE - Allows consumers/users to receive more information in a more efficient manner by combining broadcast television programming with **internet** . Since additional information is provided to consumers automatically, **advertising** is made more substantive, allowing consumers to make more informed choices. Supports analog and digital television broadcasts, without broadcasters or end-users having to alter their existing system, enabling broadcasters to reach a wide audience within a short time.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic diagram of system achieving integration of **internet** information with video **content** .

AU 200184713 A   G10L-013/08   Based on patent WO 200211120

Abstract (Basic): WO 200211120 A1
        NOVELTY - Method consists in translating web-based content into
    natural language voice content, dividing this into navigational objects
    for association with pre-built navigation objects and selecting them by
    voice. The selected object content is played sequentially and
    navigational objects include application options.
        DETAILED DESCRIPTION - There are INDEPENDENT CLAIMS for (1) a voice
    application server, (2) a method for translating textual step-based
    driving directions into voice content for playback, (3) a method for
    enabling a caller to transfer to a third party telephone number after
    hearing voice **advertisements** , (4) a method for jumping to a link
    inside a **voice   portal** by voice command, (5) a method of interacting
    with a voice home page via a telephone for providing **voice   portal**
    access via subscriber voicemail number, (6) a system for providing
    voice   portal access via a subscriber voicemail number.
        USE - Method is for voice interaction with computers, mobile
    devices, voice sites, voice content and data and web-based services via
    the Internet.
        DESCRIPTION OF DRAWING(S) - The figure shows a **voice   portal**
    architecture.

AU 200183579 A   G06F-009/00   Based on patent WO 200217069

Abstract (Basic): WO 200217069 A1
        NOVELTY - Interpreter contexts may be maintained by creating an
interpreter context for a received **document** and then storing the
context before accessing a second **document** and creating a second
interpreter context, and so on. Prompts may be mapped to prerecorded
audio using code for generating a file identifying prerecorded video
using a unique identifier and for organizing the prerecorded **audio**
into contexts. The **audio** browser is highly distributable and may be
used through a cellular **telephone** , a standard **telephone** or a PDA.
The **audio** comes from various sources including **advertisements** ,
broadcasts and **text** t **speech** generated **audio** .
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for
        (a) a method for maintaining interpreter contexts
        (b) a **voice** **browser**
        (c) apparatus for responding to a request during a voice browsing
session
        (d) apparatus for generating an **audio** response during a voice
browsing session
        (e) and a system for mapping prompts to prerecorded **audio**
        USE - In **voice** **browsers** .
        ADVANTAGE - Can efficiently generate Voice XML **documents** from
backend **servers** .
        pp; 33 DwgNo 0/11

Abstract (Basic): US 20020035600 A1
        NOVELTY - Several addresses such as URLs that identify information
   source of an online **content** relating to a program, are obtained. The
   addresses are transmitted to the user, independent of the program. The
   online **content** is automatically presented to the user during the
   program.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
   following:
        (a) Computer readable medium storing instructions for transmission
   of addresses relating to online context;
        (b) Hosting system for transmission of addresses relating to online
    content ;
        (c) Online information segment retrieval method
        USE - For transmission of addresses relating to online **contents**
   such as massive educational information in student workstations,
   class-rooms and other educational environments, interactive game shows,
    advertisements , sports, live or pre-recorded programs, **audio** or
   video programs through **Internet** , intranet, satellites, RF broadcast,
   cable, **telephone** circuit, public network, private network, **wireless**
   connection, terrestrial broadcast, etc., for enhanced video·programming
   system.
        ADVANTAGE - Allows user to receive appropriate information
   efficiently and rapidly, without the need of searching through several
   pages. Provides flexible and less complex system.
        DESCRIPTION OF DRAWING(S) - The figure shows the system design for
   receipt and decoding of digital signals at subscriber location.
        pp; 21 DwgNo 1/9

US 20020004825 A1   9 G06F-015/16   Provisional application US 2000211142

Abstract (Basic): US 20020004825 A1
       NOVELTY - An identifier for identifying a desired topic, is
   provided on a **web** site (102) accessed by user. A request is received
   from the user, and a sponsoring **web** site (104) containing full
   content associated with the identifier is dynamically selected based
   on a predetermined traffic allocation algorithm. Address information is
   sent to user for accessing the selected site.
       DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
   dynamic click-through traffic allocating system.
       USE - For allocating click-through traffic about **content** teasers
   such as news headlines, article summary, preview, video, **audio** or
   textual snippets, graphic, etc., for **web** sites containing full
   contents such as full article, story, movie, picture, etc., through
   computer network for display in electronic-mail readers, **Internet**
   browsers, **wireless Internet** devices.
       ADVANTAGE - By dynamically allocating click-through traffic to
   sponsoring site based on predetermined algorithm, the users are
   provided with recent information automatically and simultaneously,
   without updating each site, hence allows several **advertisers** to
   benefit from single **Internet advertisement** .
       DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of
   design of feeder network of **web** sites allowing to click-through to
   sponsor **web** site.
       Feeder **web** site (102)

Abstract (Basic): US 6338094 B1
     NOVELTY - A link representation comprising **content** resource
identifier, service center template file address and video data
resource identifier is displayed to user terminal. Specific video data
based on corresponding identifier, is stored and displayed according to
user selection. **Content** identified by the **content** identifier is
received either from one of the **servers** of service center.
     DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
computer program product with recorded medium storing execution program
of interactive television system.
     USE - For displaying video data including **advertisement** to user
terminal accessing **Internet** , in an interactive television system.
     ADVANTAGE - A detailed video and **audio** is displayed, visually in
response to user's selection of the link for accessing a **web** page. A
realistic and entertaining television experience especially for
advertising , is obtained.
     DESCRIPTION OF DRAWING(S) - The figure shows the flowchart of the
video data file display process.

Abstract (Basic): US 20010032234 A1
     NOVELTY - A user defined map of the **Internet   document** is
created, by securing a user input to selected region of the **document**
to be mapped. Either the text or link of the selected region is mapped
and a name is associated with the selected region. User defined map is
stored in a database of the **server** system.
     DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
computer program product for enabling a user to map an **Internet
document** .
     USE - For mapping an **Internet   document** to enable its access
over **telephone** system e.g. cellular, **wireless   telephones** . Also
for mapping intranet **documents** and files stored on personal
computers.
     ADVANTAGE - Allows user controlled access to **documents** , without
requiring any modification to **content** source of the **documents** .
Enables mapping of multiple **Internet   documents** and regions within
single user defined map. Enables user to nest links and texts in
hierarchical order so that one region is mapped from the link to
another mapped region. Enables user to eliminate undesired **content**
from sequential transmission of **audio** data, hence minimizing time
taken to access **content** from **web** .
     DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
the **voice   browser** .

Abstract (Basic): EP 1122657 A2
      NOVELTY - The frames included in framesets of accessed hypertext
   markup language **document** , are ranked based on their relative
   positions inside the framesets, so that each frame is uniquely ordered
   in the frameset. A linearized **document** for the frameset for rendering
   by **audio** browser, is produced.
      DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
   the computer readable recording medium with the program for frameset
   linearization.
      USE - For linearizing **document** frames for rendering by **voice**
   browsers which include **telephone** , computer and personal digital
   assistant.
      ADVANTAGE - Enables visually impaired users to access WWW and also
   provide hands free browsing environment.

Abstract (Basic): WO 200213121 A1
        NOVELTY - Method consists in receiving an HTTP request for **content**
    from the handheld computer, associating an **advertisement** in text
    format with the request, and sending it for playing over its **audio**
    output device for conversion to a text **advertisement** . A visual
    warning is sent when the computer **audio** channel is turned off.
        DETAILED DESCRIPTION - There is an INDEPENDENT CLAIM for
        (1) a handheld computer **advertising** computer program,
        (2) a system for providing **advertising** to a handheld computer.
        USE - Method is for delivering **advertising** **content** to users of
    handheld computers via the **Internet** .
        ADVANTAGE - Method does not interfere with the viewing of visual
    content on the computer screen.
        DESCRIPTION OF DRAWING(S) - The figure shows transfer of **content**
    from a **Web** site and an **advertisement** site to a handheld computer.

Abstract (Basic): WO 200129742 A2
      NOVELTY – The customer profile is identified from preregistered
   personalized data in shared database (112), using **voice   portal**
   (110). The received purchase request from **telephones** (100,101) is
   forwarded to vendor terminal (102), via **Internet** (106). Response of
   vendor is forwarded to customer **telephone** and product purchase and
   sale confirmation from customer and vendor are received and transaction
   is performed.
      DETAILED DESCRIPTION – The purchase request from customer is
   received from **telephones** (100,101) through **telephone** network (104).
   INDEPENDENT CLAIMS are also included for the following:
      (a) Computer system for electronic commerce transaction;
      (b) Placing order for product using **Internet   telephone** ;
      (c) Customer personalized information registration method
      USE – For purchase of goods/services through **Internet   telephone**
   e.g. for obtaining lottery results, navigation information, weather
   report, show time of events, movie, traffic report, yellow page
   listings and for purchase of airline ticket, movie ticket, **audio** CD
   by identifying customer using **voice   portals** .
      ADVANTAGE – The pre registration of user's personalized information

and using **voice portal** , eliminates need for repeatedly collect the
information every time the transaction is performed.

Patent Details:
Patent No Kind Lan Pg   Main IPC   Filing Notes
RD 443143   A   G06F-000/00

Abstract (Basic): RD 443143 A
      NOVELTY - Disclosed is a system for using a screen-based navigation
  graphical user interface (GUI) to control **server** -based **voice**
  browsers from a telephony device. The method generates aural **content**
  via a voice-based browser on a **server** and transmits it to a client
  pervasive device. Then the aural **content** is navigated through the use
  of a stylus driven GUI interface on a pervasive device. The stylus
  navigation simulates voice and dual tone multi frequency (DTMF)
  commands, voice dictation, or more complex navigation. The systems
  addresses a problem that exists with today's **web** access using
  different forms of telephony devices. Navigation of **web** **content** in
  these devices requires the use of **voice** **recognition** or DTMF, i.e.
  touch tone based navigation, or a **Wireless** Markup Language (WML) user
  interface. In **voice** **recognition** , the user is limited by the length
  of the commands generated due to noise interference as well as
  inconsistencies in the speech - for example: yes, no or one through ten
  may be the extent of what can accurately recognized. DTMF requires
  users to memorize key navigation commands or the **server** must
  explicitly prompt the user for using a specific key to generate the
  desired response. WML interfaces are limited to small screen sizes and

hence are used for abbreviated or clipped **web** **content** such as
weather reports and stock quotes. To solve this problem we claim the
use of a pervasive device which contains a stylus controlled small
screen, capable of playing sounds, connected through a telephony
network to a **server** -based **voice** **browser** . The use of a **voice**
browser **server** allows the user to eliminate the need to have lots of
memory and large screen space to support a client graphical browser
(imagine how difficult it would be to read a newspaper on a cell **phone**
display). However, the display can be used to control the **voice**
browser through simulation of DTMF or generate voice commands which
are easily recognized in response to GUI activation through the use of
a stylus. This invention increases the accuracy of access to **web**
content presented in the form of speech in pervasive devices. The
functional advantage of this invention is that it reduces the
complexity of navigating **web** **content** . The structural advantage is
reduced memory, processing power, and screen real-estate.
    USE - None given.

Abstract (Basic): US 20010054059 A1
    NOVELTY - A network operator (70) registers an user (10) who has
  opted to be an **Ad** User to receive **advertisements** through e-mail.
  The **advertisers** (60) sponser the multimedia **contents** received by
  the **Ad** User and send an e-mail including **advertisement** message as
  subject title. The **Ad** User accessing the **website** receives the
  contents and the messages separately.
    USE - For **Internet** radio station for providing multimedia
  contents such as **audio** infotainment, newspaper, magazine, movie
  rental, theatre/concert tickets, sports events, subscription TV/radio
  services, etc., to an **Ad** User who has opted to accept targeted e-mail

advertising by payment of subscription fee, and also used for subscription to video programming or electronic books.

ADVANTAGE - Since the **Ad** User receives the **contents** and **advertisement** messages separately, the user is not disturbed. The user's relationship with **content** provider, is improved by the sponsored e-mail **advertising** .

DESCRIPTION OF DRAWING(S) - The figure shows a **content** payment system.

Abstract (Basic): KR 2001076630 A

NOVELTY - A **voice   portal** service based on **voice   recognition** is provided to offer a service using a mobile **telephone** and a general **telephone** at any place.

DETAILED DESCRIPTION - A complex structure as a menu of a portal site being embodied on a **web** is embodied using a voice index by constructing a voice menu based on superior recognition. A user provides a portal service capable of surfing of a **web** concept using a **telephone** and a voice command without an additional device as a computer or a monitor by replacing a device concept as a mouse or a keyboard into one's voice. If a voice command is inputted, a **server** based on a voice communication senses the voice command and provides the information to the user's ear. The process is described as follows. A user is connected to the site. A **voice   recognition** menu is provided. A menu is selected. A movement to the selected menu is performed. Thus, information is achieved.

Abstract (Basic): KR 2001074228 A
       NOVELTY - A **telephone** voice domain and a **voice   portal** using a
     VXML are provided for a user to search and use information through a
     voice domain by using an IVR(interactive voice response), **VXML** , voice
     compounding, and **voice   recognition** on a **telephone** network.
       DETAILED DESCRIPTION - A **VXML   server** makes functions of a mouse
     and a monitor be operated by **voice   recognition** and voice
     composition on a **telephone** network and a **web** . A **VXML** editor has a
     scenario generator concept performing a generalization of a function of
     a GUI editor for editing an HTML **document** on a **web** for a service on
     a **telephone** network. **VXML** element techniques having a compatibility
     compared to the existing **voice   recognition** and voice compounding
     techniques are developed and connected to a concept of a voice domain.

Abstract (Basic): WO 200171543 A2
        NOVELTY - A request to execute the transactions related to
    identified item or service, is sent to a server correspond to user
    answer. The transaction is executed without allowing the user to
    perform a single action on a computer interface.
        DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
    following:
        (a) Voice-controlled transaction service;
        (b) Internet-based information access providing service;
        (c) Computer program product
        USE - For Internet and electronic commerce for **advertising** to
    sell products or services such as music, books and for providing
    information about weather, traffic, movies, cost comparisons and
    transactions for e.g. stock trading, restaurant reservations, etc.
        ADVANTAGE - Using voice over telephone, retrieving, organizing and
    storing information from variety of websites and Internet services are
    performed continually with high speed, thereby an efficient access is
    provided. The transactions are executed without the user pressing a
    button, clicking a mouse, or any other manual input.
        DESCRIPTION OF DRAWING(S) - The figure shows a flow diagram
    illustrating a process of carrying out a transaction using a **voice

Abstract (Basic): WO 200161895 A2

     NOVELTY - The method involves registering an artist **server** via a
digital network. **Audio content** is received from the artist at the
server via the digital network. The **content** is stored at the **server**
. The **audio content** is promoted via the digital network to several
audio recipients from the **server** . A payment is processed from the
artist at the **server** .
     The registering step comprises obtaining financial information from
the artist to be used by the processing step
     DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a system
configured to implement the method, for a computer readable medium and
for a system for promoting digital **audio content** .
     USE - For promoting **audio content** . For promoting songs,
advertisements and other **audio content** to radio stations via a
digital network e.g. the **Internet** .
     ADVANTAGE - System is efficient, cost effective and fair to both
artist and recipient.
     DESCRIPTION OF DRAWING(S) - The figure shows a method for promoting
audio content via a digital network.

Abstract (Basic): WO 9908194 A1
     NOVELTY - **Audio** and video **content** are stored as digital files
on a multimedia **server** (160) for distribution throughout a site via a
network (125).
     DETAILED DESCRIPTION - A network operating center (120) is coupled
to a network management center (10), and a multicast transmission
medium couples the network operating center (120) and a multimedia
server (160). A listening post is coupled to the multimedia **server**
(160) by a network (125). One or more **audio** /video displays are
capable of displaying video and playing **audio** , and are coupled to the
multimedia **server** (160) by the network (125). The **audio** and video
content are stored in digitized files (122) on the multimedia **server**
(160) for distribution throughout the site via the network. INDEPENDENT
CLAIMS are included for a method for distributing promotional material
to a user in a commercial sales outlet, and a digital department system
having an audiovisual display.
     USE - Aggregating and distributing audiovisual **content** related to
given product **content** or **advertising** regarding the product, to
customers, and allowing customer to interactively preview selected
portions of the **content** .

ADVANTAGE - Allows customers to preview **content** , product demonstrations, **advertising** , and other informational, entertainment and promotional **content** , automatically in response to consumer inputs.

DESCRIPTION OF DRAWING(S) - The drawing shows a digital department system of the invention.

Abstract (Basic): WO 9822882 A
        The delivery system transmits information to end users via the
    Internet over e.g. **telephone** , satellite or optical links on a
    non-real-time discontinuous basis in which the **server** providing the
    information periodically ascertains whether the end user terminal (16)
    is busy.
        If so, the transmission to the end user is terminated and the
    information is stored until such time as the 'busy' indication is
    terminated. The indication for the end user of incoming information is
    in the form of an icon (18) generated on-screen on which the user can
    click to obtain the sought after information.
        USE - Transmission of information over **Internet** for providing
    users with video, **audio** , hyper-text and **web** **content** on periodic
    basis, e.g. **documents** , program material, advertising etc.
        ADVANTAGE - Ensures to information providers that they will not
    have any bandwidth limitations imposed on them.
        Dwg.1/5
Title Terms: INFORMATION; DELIVER; SYSTEM; VIDEO; **AUDIO** ; SERVE; PERIOD;
  CHECK; BUST; STATUS; NETWORK; END; USER; TERMINAL; PRIOR; TRANSMISSION;
  STORAGE; INFORMATION
Derwent Class: T01
International Patent Class (Main): G06F-015/00; **G06F-015/16** ; G06F-015/173
International Patent Class (Additional): G06F-017/30
File Segment: EPI
